Binomial Coefficients and Identities

Section 6.4

Section Summary

- The Binomial Theorem
- Pascal's Identity and Triangle

Powers of Binomial Expressions

- **Definition**: A *binomial* expression is the sum of two terms, such as x + y. (More generally, these terms can be products of constants and variables.)
- We can use counting principles to find the coefficients in the expansion of $(x + y)^n$ where n is a positive integer.

Example: Expand $(x + y)^3$ $x^3 + 3x^2y + 3xy^2 + y^3$

Powers of Binomial Expressions

 $(x+y)^{3} = (x+y)(x+y)(x+y)$ = (xx + xy + yx + yy)(x+y) = xxx + xxy + xyx + xyy + yxx + yxy + yyx + yyy = x^{3} + 3x^{2}y + 3xy^{2} + y^{3}

How many **ways** are there to get the terms

- x³ : Choose x three times
- x^2y : Choose x twice (and y once)
- *xy*² : Choose x once (and y twice)
 - : Choose x zero times

 V^3

 $\binom{3}{3} = C(3,3) = 1$ $\binom{3}{2} = C(3,2) = 3$ $\binom{3}{1} = C(3,1) = 3$ $\binom{3}{0} = C(3,0) = 1$

Binomial Theorem

Binomial Theorem: Let *x* and *y* be variables, and *n* a nonnegative integer. Then:

$$(x+y)^n = \sum_{j=0}^n \left(\begin{array}{c}n\\j\end{array}\right) x^{n-j} y^j = \left(\begin{array}{c}n\\0\end{array}\right) x^n + \left(\begin{array}{c}n\\1\end{array}\right) x^{n-1} y + \dots + \left(\begin{array}{c}n\\n-1\end{array}\right) x y^{n-1} + \left(\begin{array}{c}n\\n\end{array}\right) y^n.$$

Proof: We use combinatorial reasoning. The terms in the expansion of $(x + y)^n$ are of the form $x^{n-j}y^j$ for j = 0, 1, 2, ..., n. To form the term $x^{n-j}y^j$, it is necessary to choose n-j x's from the n sums. Therefore, the coefficient of $x^{n-j}y^j$ is $\binom{n}{n-j}$, which equals $\binom{n}{j}$.

Using the Binomial Theorem **Example**: What is the expansion of $(x + y)^4$?

Solution: From the binomial theorem, we know that

$$(x + y)^{4} = \sum_{j=0}^{4} {4 \choose j} x^{4-j} y^{j}$$

= ${4 \choose 0} x^{4} + {4 \choose 1} x^{3} y + {4 \choose 2} x^{2} y^{2} + {4 \choose 3} x y^{3} + {4 \choose 4} y^{4}$
= $x^{4} + 4x^{3} y + 6x^{2} y^{2} + 4x y^{3} + y^{4}.$

Using the Binomial Theorem

Example: What is the coefficient of $x^{12}y^{13}$ in the expansion of $(2x - 3y)^{25}$?

Solution: We view the expression as $(2x + (-3y))^{25}$. By the binomial theorem

$$(2x + (-3y))^{25} = \sum_{j=0}^{25} \begin{pmatrix} 25 \\ j \end{pmatrix} (2x)^{25-j} (-3y)^j.$$

The coefficient of $x^{12}y^{13}$ in the expansion is obtained when j = 13.

$$\begin{pmatrix} 25\\13 \end{pmatrix} 2^{12} (-3)^{13} = -\frac{25!}{13!12!} 2^{12} 3^{13}.$$

A Useful Identity Corollary 1: With $n \ge 0$, $\sum_{k=0}^{n} \binom{n}{k} = 2^{n}$.

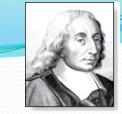

Proof (*using binomial theorem*): With x = 1 and y = 1, from the binomial theorem we see that:

$$2^{n} = (1+1)^{n} = \sum_{k=0}^{n} \binom{n}{k} 1^{k} 1^{(n-k)} = \sum_{k=0}^{n} \binom{n}{k}.$$

A Useful Identity Corollary 1: With $n \ge 0$, $\sum_{k=0}^{n} \binom{n}{k} = 2^{n}$.

Proof (*combinatorial*): Consider the subsets of a set with *n* elements. There are $\binom{n}{0}$ subsets with zero elements, $\binom{n}{1}$ with one element, $\binom{n}{2}$ with two elements, ..., and $\binom{n}{n}$ with *n* elements. Therefore the total is $\sum_{k=0}^{n} \binom{n}{k}$.

Since, we know that a set with *n* elements has 2^n subsets, we conclude: $\sum_{k=0}^n \binom{n}{k} = 2^n$.

Blaise Pascal

(1623 - 1662)

Pascal's Identity

Pascal's Identity: If *n* and *k* are integers with $n \ge k \ge 0$, then

 $\left(\begin{array}{c} n+1\\ k\end{array}\right) = \left(\begin{array}{c} n\\ k-1\end{array}\right) + \left(\begin{array}{c} n\\ k\end{array}\right).$

Proof (*combinatorial*): Let *T* be a set where |T| = n + 1, $a \in T$, and $S = T - \{a\}$. There are $\binom{n+1}{k}$ subsets of *T* containing *k* elements. Each of these subsets either:

- contains *a* with k 1 other elements, or
- contains *k* elements of *S* and not *a*.

There are

- $\binom{n}{k-1}$ subsets of k elements that contain a, since there are $\binom{n}{k-1}$ subsets of k-1 elements of S,
- $\binom{n}{k}$ subsets of k elements of T that do not contain a, because there are $\binom{n}{k}$ subsets of k elements of S.

Hence,

$$\begin{pmatrix} n+1 \\ k \end{pmatrix} = \begin{pmatrix} n \\ k-1 \end{pmatrix} + \begin{pmatrix} n \\ k \end{pmatrix}.$$

See Exercise 19 for an algebraic proof.

Pascal's Triangle

The *n*th row in the triangle consists of the binomial coefficients $\binom{n}{k}$, k = 0, 1, ..., n.

						1					
$\binom{1}{0}$ $\binom{1}{1}$						1	1				
$\binom{2}{0}\binom{2}{1}\binom{2}{2}$	By Pascal's identity:				1	2	1				
$\binom{3}{0}$ $\binom{3}{1}$ $\binom{3}{2}$ $\binom{3}{3}$	$\begin{pmatrix} 6\\4 \end{pmatrix} + \begin{pmatrix} 6\\5 \end{pmatrix} = \begin{pmatrix} 7\\5 \end{pmatrix}$)			1	3	3	1			
$\binom{4}{0}\binom{4}{1}\binom{4}{2}\binom{4}{3}\binom{4}{4}$				1	4	6	4	1			
$\binom{5}{0}\binom{5}{1}\binom{5}{2}\binom{5}{3}\binom{5}{4}\binom{5}{5}$			1		5	10	10	5 1			
$\binom{6}{0}$ $\binom{6}{1}$ $\binom{6}{2}$ $\binom{6}{3}$ $\binom{6}{4}$ $\binom{6}{5}$ $\binom{6}{6}$		1	1	6	15	20	15	6	1		
$(\frac{7}{6})(\frac{7}{1})(\frac{7}{2})(\frac{7}{3})(\frac{7}{4})(\frac{7}{5})(\frac{7}{6})(\frac{7}{6})$	⁷ 7)	1	7		21	35	35 2	1 7		1	
$\begin{pmatrix} 8\\0 \end{pmatrix} \begin{pmatrix} 8\\1 \end{pmatrix} \begin{pmatrix} 8\\2 \end{pmatrix} \begin{pmatrix} 8\\3 \end{pmatrix} \begin{pmatrix} 8\\4 \end{pmatrix} \begin{pmatrix} 8\\5 \end{pmatrix} \begin{pmatrix} 8\\6 \end{pmatrix} \begin{pmatrix} 8\\7 \end{pmatrix}$	(⁸ / ₈) 1	8	8	28	56	70	56	28	8		1
						•••					
(a)						(b)					

By Pascal's identity, adding two adjacent bionomial coefficients results is the binomial coefficient in the next row between these two coefficients.

Pascal's Triangle $\begin{pmatrix} 0\\ 0 \end{pmatrix}$ 1 $\binom{1}{0}\binom{1}{1}$ $\binom{2}{0}\binom{2}{1}\binom{2}{2}$ 1 2 1 By Pascal's identity: $\binom{3}{0}\binom{3}{1}\binom{3}{2}\binom{3}{3}$ $\binom{6}{4} + \binom{6}{5} = \binom{7}{5}$ 1 3 3 $\begin{pmatrix} 4\\0 \end{pmatrix} \begin{pmatrix} 4\\1 \end{pmatrix} \begin{pmatrix} 4\\2 \end{pmatrix} \begin{pmatrix} 4\\3 \end{pmatrix} \begin{pmatrix} 4\\4 \end{pmatrix}$ 6 1 $\binom{5}{0}\binom{5}{1}\binom{5}{2}\binom{5}{3}\binom{5}{4}\binom{5}{5}$ 10 10 5 1 5 $\begin{pmatrix} 6 \\ 0 \end{pmatrix} \begin{pmatrix} 6 \\ 1 \end{pmatrix} \begin{pmatrix} 6 \\ 2 \end{pmatrix} \begin{pmatrix} 6 \\ 3 \end{pmatrix} \begin{pmatrix} 6 \\ 4 \end{pmatrix} \begin{pmatrix} 6 \\ 5 \end{pmatrix} \begin{pmatrix} 6 \\ 6 \end{pmatrix}$ 20 15 15 6 $\binom{7}{0}\binom{7}{1}\binom{7}{2}\binom{7}{3}\binom{7}{4}\binom{7}{5}\binom{7}{6}\binom{7}{7}$ 35 21 35 21 7 $\binom{8}{0}\binom{8}{1}\binom{8}{2}\binom{8}{3}\binom{8}{4}\binom{8}{5}\binom{8}{6}\binom{8}{7}\binom{8}{8}$ 1 56 70 56 28 28
